Updating the *Work Program*

Work Program by *ICS* Code

Work Program by Stages in Standard-Development Process

Documents Published since the Last *Work Program* (6 months ago)

PURPOSE OF THE *WORK PROGRAM*

The *Work Program* is completed with a list of draft standards published since the last publication of the *Work Program* (6 months ago). Publication by the Bureau de normalisation du Québec (BNQ) of its *Work Program* meets a fundamental principle specified in Appendix 3 of the *Code of Good Practice for the Preparation, Adoption and Application of Standards* prepared by the *World Trade Organization in the Agreement on Technical Barriers to Trade*. However, over and above the invitation launched by the WTO to all standardizing bodies, the BNQ is proud to ensure that all concerned parties are informed of work undertaken by the BNQ in the pursuit of its mission.

INFORMATION PROVIDED BY THE *WORK PROGRAM*

For standard development projects underway, the *Work Program* provides information relative to:

- the subject of each draft standard in the *International Classification for Standards* (*ICS*);
- the progress of work in the development of a draft standard and the expected date of completion of the stage of work underway;
- international standards considered in work to develop the draft standard, where relevant;
- the date of planned publication of the draft standard.

The *Work program* is divided into two sections; the first presents the draft standards by *ICS* classification code; the second presents the draft standards by stages.

The *Work Program* is completed by a list of the normative documents published since publication of the last semestrial *Work Program*.

INTERNATIONAL CLASSIFICATION FOR STANDARDS

The first section of the *Work Program* identifies standard-development projects classified by subject according to the ***International Classification for Standards (ICS)***. The purpose is to facilitate grouping together and locating related standards catalogued by subject matter. The *ICS* is a classification system developed by the International Organization for Standardization (IOS), serving primarily as a uniform structure for standards catalogues and work programs published by standardizing bodies. The intention of the *ICS* system is to offer standards users a standing-order system applying to all national and international collections of standards.

The **structure by subject matter** resulting from the *ICS* system is a hierarchical classification consisting of three levels. The first level, identified by a two-digit number, covers fields [for example: **21**]; the two other levels correspond to groups [for example: **21.040**] and sub-groups [for example: **21.040.30**] (*ICS* rules of flexibility of application also allow the "creation", if need be, of a unit subdivision (fourth level), which connects to existing *ICS* levels by a hyphen followed by two digits [for example: **21.180-10**; **21.060.70-10**]).

According to the ***ICS*** system, a same standard may be classified in several categories or subcategories, based on the standard's most fundamental characteristics. In addition, owing to the use of code numbers, the ***ICS*** system has the advantage of allowing communication, independent of language, between standards agents and standards users.

STAGES IN STANDARD-DEVELOPMENT PROCESS

The second section of the *Work Program* presents the draft standards by stages of progress. The different stages associated with the development of a BNQ draft standard are described in Document NQ 9950-099 *Development of Consensual Standards -- Rules of Procedure* available from the customer service of the BNQ. The stages are described briefly hereafter.

In order rapidly to ascertain the progression of a draft, without regard for the language of the interested party, the BNQ has developed a coding system applying to the various stages of development of a draft standard. The coding system is based on ISO/IEC identification of stages.

PROCESS FOR THE DEVELOPMENT OF A CONSENSUAL STANDARD

ANALYSIS OF THE SUBJECT (stage 10)

The analysis of the subject allows the BNQ to determine if a request for the development of a standard is pertinent after a review of existing national and international standards is undertaken.

FEASIBILITY (stage 15)

A feasibility study is then undertaken in order to answer the fundamental questions, such as, if the expected benefits surpass the resources needed for the project. This study allows to identify the interested stakeholders, the possible financial sources and the precise purpose and scope of the proposed standard.

PREPARATION OF A PRELIMINARY DOCUMENT (stage 20)

A preliminary document is prepared by the standards agent for the use of the technical committee members. This preliminary document is obtained either from the current standard for a revision project or from any pertinent reference document.

FORMATION OF A STANDARDS COMMITTEE (stage 25)

When forming a balanced **standards committee,** the standards agent must gather a reasonable number of representatives from the interest groups concerned by the subject matter of the standard, typically:

- representatives of concerned companies (suppliers);
- representatives of potential users;
- representatives with a more general interest.

COMMITTEE REVIEW (stage 30)

The standards agent then sets in motion the **committee work** phase, which consists of holding meetings of committee members to establish a consensus governing the technical contents of the standard. The standards agent must schedule meetings, prepare notices and agendas, facilite meetings, act in the capacity of meeting secretary, make corrections to, and draft, the draft standard in light of the consensus obtained among committee members and draft minutes of meetings.

LINGUISTIC EDITION AND PROOF-READING (stage 35)

A **linguistic editing and proof-reading**, carried out by the editor/proof-reader of the BNQ and an internal review committee, aims at ensuring that the draft standard for which a consensus has been obtained by the standards committee is sufficiently precise and well-drafted, and that requirements specified therein are explicit enough to avoid any ambiguity. Although the standards committee decides on the technical content of the draft standard, the BNQ is responsible for the document presentation and the language quality.

PUBLIC INQUIRY (stage 40)

The purpose of the **public inquiry** is to verify the acceptability of the proposed draft standard by concerned parties. The document drafted on the basis of a consensus, and having been subjected to a linguistic edition and proof-reading, is then made available to the public for a 60 calendar-day comment period (stage 40.20). It is also sent to a number of organizations and parties concerned by the subject matter who may wish to comment on document contents. The aim is to gather comments for the committee, extend the consensus and put the finishing touches on the draft standard by responding to the concerns expressed by the consulted parties (stage 40.60).

STANDARDS COMMITTEE VOTE (stage 50)

The consensus of the committee shall then be confirmed by a formal vote.

SECOND-LEVEL REVIEW (stage 53)

Following a positive vote, the draft standard is submitted to a second level review committee. The purpose of this committee is to confirm that the draft standard has been developed in conformity with the consensual standard-development procedures and policies of the BNQ.

PUBLICATION OF A NATIONAL STANDARD OF CANADA (stage 60)

The BNQ will proceed with the **publication of the standard** only after **the standards committee vote and a second-level committee vote** confirming general agreement with the final draft standard. If the standard is a NSC, an approval by the Standards Council of Canada (SCC) shall also be obtained (stage 58).

SYSTEMATIC REVIEW (stage 90.20)

A systematic review is undertaken approximately five years after the publication date is completed. This review allows to determine if the standard is still of value, if it should be revised, modified, reaffirmed or withdrawn. This is done through a consultation of the stakeholders and the committee members. Following this, a recommendation by the standards agent is given to the BNQ steering committee.

POST-SYSTEMATIC REVIEW STATUS

Following the systematic review the standard is classified in the *Work Program* as needing a modification or a revision (stage 90.92), a reaffirmation (stage 90.94) or a withdrawal (stage 90.98).

SEARCHING FOR A DRAFT STANDARD

The first step in locating a draft standard is to consult the *International Classification for Standards* (*ICS*) in order to pinpoint as precisely as possible the subject matter, and to ascertain whether a draft standard is being drafted. Then the list must be consulted to determine if one or more draft standards are listed on the subject. A draft standard may be classified into several groups or sub-groups based on its most fundamental characteristics.

UPDATING THE *WORK PROGRAM*

The *Work Program* is updated every 6 months. *Work Program* information is also forwarded to the Standards Council of Canada (SCC) and made available in it Web site [www.scc.ca].
